

# RPS Website SEO Audit

www.rainbowpreschools.com · technical, on-page, local, performance, structured data, AEO/GEO and off-site, with a phased fix guide written as Replit Agent prompts

|                          |                                                                                                                                                                                                     |
|--------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Audit date</b>        | 23 September 2026                                                                                                                                                                                   |
| <b>Scope</b>             | All 98 live HTML pages found on the site (88 indexable), the code repository (commit d941ef7, 22 Sep 2026), Google Search Console, Chrome UX Report, lab performance tests and third-party listings |
| <b>Prepared for</b>      | Rainbow Preschool International, Digital Marketing                                                                                                                                                  |
| <b>Evidence standard</b> | Every statement is backed by a measurement, a live test, a code reference or a quoted Google source. Anything that could not be measured is listed as a gap, not estimated.                         |

- 2 Executive summary and scorecard
- 3 Urgent: security and privacy issues found during the audit
- 4 How RPS performs in Google today (Search Console and real-user speed data)
- 5 Crawling, indexing, robots.txt, sitemap and redirects
- 6 What Google sees vs what parents see (rendering)
- 7 Internal linking and site architecture
- 8 On-page SEO: titles, descriptions, headings, duplicates
- 9 Structured data (schema)
- 10 Local SEO and NAP consistency
- 11 Page speed and Core Web Vitals
- 12 Content quality, E-E-A-T and freshness
- 13 AEO / GEO: readiness for AI answers and AI search
- 14 Off-site: listings, citations and backlinks
- 15 Analytics, tracking and webmaster verification
- 16 What is already working well
- 17 Fix guide: phased plan with copy-paste Replit Agent prompts
- A Appendix A: every page, one row each
- B Appendix B: link, redirect and crawler test lists
- C Appendix C: sources and method

## 1. How to read this report

---

**Severity.** **Critical** risk of a Google penalty, a large ranking loss, or a data or legal exposure. **High** clear loss on important pages. **Medium** measurable but contained. **Low** housekeeping.

**"Google's view" vs "visitor's view".** This site shows search engines and AI crawlers a separate, simplified version of every page (the server builds it specially for bots). Real parents get the full React website. We measured both versions of every page, because Google ranks the first one and parents judge the second.

**Evidence labels used in findings.** *Live test* = we requested the page on 23 Sep 2026 and recorded the result. *Crawl* = our full crawl of all pages as Googlebot. *Render* = every page loaded in a real Chrome browser as a visitor (desktop and mobile). *Code* = file and line in the repository. *GSC* = Google Search Console. *CrUX* = Google's real-user speed data. *Lab* = Lighthouse tests.

## Data sources

| Source                                                           | What it covered                                                                                                                                                    | Period / date                                                              |
|------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------|
| Full crawl as Googlebot                                          | All URLs in the sitemap (86), all routes in the code (69) and every internal link found: 122 URLs, of which 98 are HTML pages returning 200 and 21 are images/PDFs | 23 Sep 2026                                                                |
| Full render as a visitor                                         | The same 98 HTML pages, in Chromium on desktop (1366 px) and mobile (412 px)                                                                                       | 23 Sep 2026                                                                |
| Repository review                                                | server/, client/, shared/, scripts/, public files, docs (read-only)                                                                                                | Commit d941ef7 (22 Sep 2026)                                               |
| Google Search Console (property sc-domain:rainbowpreschools.com) | Clicks, impressions, CTR, position by query, page, device and country; 10 URL Inspections                                                                          | 24 Aug to 22 Sep 2026 (daily trend); 26 Aug to 23 Sep 2026 (28-day tables) |
| Chrome UX Report (CrUX)                                          | Real-user Core Web Vitals for the whole site (origin level)                                                                                                        | 25 Aug to 21 Sep 2026                                                      |
| Lighthouse 13.5.0 lab tests                                      | 8 key pages, mobile and desktop, 3 runs each (median reported)                                                                                                     | 23 Sep 2026                                                                |
| Crawler access tests                                             | What 17 search and AI crawlers receive (Googlebot, Bingbot, GPTBot, ClaudeBot, PerplexityBot and others)                                                           | 23 Sep 2026                                                                |
| Third-party listings                                             | 20 listing URLs checked (Edustoke, ProEves, Kiddenz, Justdial, Sulekha, IndiaMART and others), Wikidata, social profiles                                           | 23 Sep 2026                                                                |

## What could not be measured (data gaps)

| Item                                                                                                    | Why                                                                                                                                | How to get it                                                                         |
|---------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------|
| Keyword rankings beyond Search Console, backlinks, referring domains, competitors, AI-visibility data   | The Semrush connection returned "not enough API units" for 6 of 7 toolkits and "no plan that includes MCP access" for traffic data | Add Semrush API units, or use Search Console's Links report for a basic backlink list |
| Search Console history older than 30 days, more than 100 rows, and more than 10 URL inspections per day | Free plan of the Search Console connector                                                                                          | Search Console web interface, or a paid connector plan                                |
| Core Web Vitals per page (only site-wide available); desktop field data                                 | Connector plan limit; CrUX has phone data only for this site                                                                       | Search Console → Core Web Vitals report                                               |
| Google Business Profile names, categories, reviews, insights                                            | No Business Profile connection; Maps pages cannot be read automatically                                                            | Check each profile manually (checklist in section 10)                                 |
| Justdial and Sulekha listing details; Facebook and Instagram profiles                                   | Sites blocked automated access (403 / login walls)                                                                                 | Check manually                                                                        |
| How often ChatGPT, Gemini, Perplexity etc. cite RPS                                                     | No AI-citation tracking tool is connected                                                                                          | Manual prompt tests, or an AI-visibility tool                                         |
| Google Analytics 4 traffic and conversions                                                              | Not connected in this session                                                                                                      | GA4 interface                                                                         |

Lab speed tests ran from a cloud server in the USA, so their absolute timings are indicative only. The real-user CrUX data in section 11 reflects actual visitors.

## 2. Executive summary

**Verdict.** Google has indexed the site and it is gaining ground: the daily average position moved from 15.1 on 24 August to between 8.5 and 9.8 on every day from 15 to 22 September (GSC daily data). But half of the clicks with a known search query are brand searches for "Rainbow", only 20 of 125 come from non-brand local searches, and the pages meant to win new parents rank on page 2 or 3. The main causes are structural and fixable: Google is shown a separate copy of the site that is thinner on key pages, worded differently, and in which 62 of 88 indexable pages receive no internal link; the structured data breaks Google's review rules; centre details (addresses, phones, PIN codes, hours) contradict each other; and phone users wait too long for pages to load.

**363**

Google clicks in 30 days  
(24 Aug–22 Sep)

**36,653**

Impressions in the same  
30 days; CTR 0.99%

**62 / 88**

Indexable pages with zero  
internal links in the HTML  
Google receives

**Failed**

Core Web Vitals on phones  
(real users): LCP 3.66 s,  
INP 375 ms

**26**

Pages with rating markup  
Google's rules don't allow  
(6 also carry self-written  
reviews)

**6 of 6**

Centres with conflicting  
PIN codes on the site itself

**24**

Pages where visitors get a  
different H1 (23) or none  
(1) compared with Google

**2.1 s**

75th-percentile server  
response time (TTFB) on  
phones; rated "poor"

### Scorecard

| Area                           | Status   | One-line reason                                                                                                                                   |
|--------------------------------|----------|---------------------------------------------------------------------------------------------------------------------------------------------------|
| Security and privacy (non-SEO) | Critical | Lead data API open to anyone; a Google Cloud private key was committed to the repo; parent/child names and phone numbers sent to Google Analytics |
| Indexing and crawl control     | High     | Pages indexed fine, but robots.txt hides redirects and noindex tags; /summer-camp is "Indexed, though blocked by robots.txt"                      |
| Rendering (Google vs visitor)  | Critical | Separate bot HTML differs in words, H1s, titles, images and links on most pages                                                                   |
| Internal linking               | Critical | In Google's copy, 62 of 88 indexable pages receive no internal link, including all 30 blog posts and 22 of 23 articles                            |
| On-page basics                 | Medium   | Unique titles and descriptions everywhere; 20 titles too long; homepage title/H1 inconsistent                                                     |
| Structured data                | Critical | Self-serving reviews and aggregated Google ratings in markup; conflicting business entities; broken logo URLs                                     |
| Local SEO and NAP              | High     | PIN codes, phones, hours and map pins disagree across the site and directories                                                                    |
| Page speed / Core Web Vitals   | High     | Fails on phones; slow server response is the largest part of load time                                                                            |
| Content and E-E-A-T            | Medium   | Good long-form blog content; stale "2025-26" copy on 21 pages; an impossible "6 generations" claim; near-duplicate locality pages                 |
| AEO / GEO (AI search)          | Medium   | AI crawlers are allowed and get full text; but facts conflict across sources and FAQ answers are hidden in code on 18 pages                       |

| Area                 | Status       | One-line reason                                                                                |
|----------------------|--------------|------------------------------------------------------------------------------------------------|
| Off-site / backlinks | Not measured | Semrush unavailable; listings show wrong phones, wrong centre data and links to redirects/404s |

## Top 10 priorities (in order)

| #  | Action                                                                                                             | Section | Prompt           |
|----|--------------------------------------------------------------------------------------------------------------------|---------|------------------|
| 1  | Lock the open lead-data API; delete and replace the exposed Google Cloud key; stop sending names and phones to GA4 | 3       | P0-1 to P0-4     |
| 2  | Remove self-serving Review and AggregateRating markup (26 pages)                                                   | 9       | P1-1             |
| 3  | Fix robots.txt so Google can see redirects and noindex tags                                                        | 5       | P1-2             |
| 4  | Fix broken and redirecting internal links, including the /blog grid's 116 redirecting links                        | 7       | P1-3             |
| 5  | Give Google real links: link every blog post, article and locality page in the bot HTML                            | 7       | P2-1 to P2-4     |
| 6  | Make Google's copy match the visitor copy (words, H1, titles, images, visible FAQs)                                | 6, 8    | P3-1 to P3-5     |
| 7  | One clean business entity per centre with verified address, PIN, phone, hours and map pin                          | 9, 10   | P4-1 to P4-3     |
| 8  | Cut server response time and script weight on phones                                                               | 11      | P5-1 to P5-6     |
| 9  | Correct listings on Edustoke, ProEves, Kiddenz, Yellow Slate, Justdial and others                                  | 14      | Manual checklist |
| 10 | Refresh stale copy, remove unverifiable claims, differentiate locality pages                                       | 12      | P6-1 to P6-4     |

**Deploy in waves, not all at once.** Releasing the fixes in waves about 7–10 days apart, with a Search Console check after each, limits risk and shows which change caused any ranking movement. The fix guide (section 17) is organised this way.

### 3. Urgent: security and privacy issues found during the audit

These are not SEO issues, but they were found while auditing and carry legal and reputational risk, so they come first.

#### SEC-1 Lead data API is open to anyone

Urgent

**What we found.** The address `/api/contacts` returns stored enquiries without any login.

**Evidence.** Live test (23 Sep, normal browser, not logged in): HTTP 200, 8,447 bytes of JSON returned (content not opened or saved). Code: `server/routes.ts` lines 741–749 have no authentication check. The same file also has unauthenticated `GET /api/gsc/snapshots` (≈778), `POST /api/gsc/snapshots` (≈788), `DELETE /api/gsc/snapshots/:id` (≈838, anyone can delete data), `GET /api/gsc/sync/status` (≈952), `POST /api/gsc/sync` (≈981) and `POST /api/test-mcb` (≈1020, can push leads into the CRM).

**Why it matters.** Anyone who finds the address can download parents' enquiry details. Under India's Digital Personal Data Protection Act 2023, organisations must protect personal data they collect.

**Fix.** Prompt P0-1 today.

#### SEC-2 Google Cloud private key committed to the code repository

Urgent

**What we found.** The file `attached_assets/gtm-txl5cz-mmuxy-c88e18824a5c_...json` contains a private key for the service account `gsc-sync@gtm-txl5cz-mmuxy.iam.gserviceaccount.com`. The repository was made public on 23 Sep for this audit.

**Evidence.** Code (file present at commit d941ef7; key ID begins c88e1882).

**Why it matters.** Anyone who copied the repository can act as that service account. Removing the file does not help on its own because it stays in Git history.

**Fix.** Make the repository private again. In Google Cloud Console → IAM & Admin → Service Accounts → `gsc-sync` → Keys, delete the key starting c88e1882 and create a new one. Paste the new key into the existing Replit Secret `GSC_SERVICE_ACCOUNT_KEY` (the code already reads it from there). Then run P0-2.

#### SEC-3 Parent names, child names and phone numbers are sent to Google Analytics

Urgent

**What we found.** Form-submit events include `parent_name`, `student_name` and `phone`.

**Evidence.** Code: `client/src/lib/analytics.ts` lines 184–187, 244–245, 366–367; `public/playgroup-fast.html` line 232 (same pattern in the nursery, kindergarten and daycare fast pages).

**Why it matters.** Google Analytics' terms prohibit sending personally identifiable information, and Google can delete the property's data. A child's name is especially sensitive.

**Fix.** Prompt P0-3.

#### SEC-4 Internal tools are public and advertised in robots.txt

High

**What we found.** `/gsc` (the internal Search Console dashboard, marked "Do not share the URL publicly" in its own code) and `/dummy` (the homepage work-in-progress) load for anyone.

**Evidence.** Live test: both return 200. robots.txt lists them in Disallow lines, which publishes their addresses. Code: `client/src/App.tsx` 230-231, 316; `gsc-dashboard.tsx` 3016.

**Why it matters.** Exposes internal performance data and unreleased work; robots.txt is public and does not protect anything.

**Fix.** Prompt P0-4.

## 4. How RPS performs in Google today

### 4.1 Search Console totals

| Metric                                        | Value                                                                                       | Period                         |
|-----------------------------------------------|---------------------------------------------------------------------------------------------|--------------------------------|
| Clicks / impressions / CTR / average position | 363 / 36,653 / 0.99% / 13.6                                                                 | 24 Aug–22 Sep 2026 (30 days)   |
| Mobile                                        | 226 clicks, 22,744 impressions, CTR 0.99%, avg position 8.5                                 | 26 Aug–23 Sep 2026 (28 days)   |
| Desktop                                       | 113 clicks, 10,537 impressions, CTR 1.07%, avg position 23.7                                |                                |
| India share                                   | 297 of 341 clicks (87%); USA 20 clicks                                                      |                                |
| Daily average position                        | 15.1 on 24 Aug → between 8.5 and 9.8 every day from 15 to 22 Sep                            | Daily series                   |
| Google updates in the window                  | August 2026 spam update ran 18–21 Aug, just before this window. No core update overlaps it. | Google Search Status Dashboard |

### 4.2 Who is clicking: half of the known queries are brand searches

Search Console reports queries for 125 of the clicks (the rest are hidden by Google for privacy). Of those 125: **63 clicks (50%) are brand searches** containing "rainbow"; **20 are non-brand local searches** (such as "pre school in thane", "preschool near me"); **42 are informational** (such as "pre kg full form", "national symbols of india for kids").

| Money query (non-brand)          | Clicks | Impr. | Avg position |
|----------------------------------|--------|-------|--------------|
| pre school in thane              | 4      | 20    | 8.7          |
| preschool near me                | 2      | 278   | 30.5         |
| play group near me               | 2      | 32    | 4.3          |
| pre school thane                 | 2      | 31    | 10.7         |
| pre school near me               | 1      | 81    | 9.7          |
| preschool thane                  | 1      | 46    | 9.7          |
| playgroup school near me         | 1      | 31    | 6.5          |
| play school in thane             | 1      | 29    | 14.3         |
| pre schools in thane             | 1      | 15    | 1.9          |
| pre primary school in thane      | 1      | 12    | 14.3         |
| schools in thane                 | 1      | 12    | 59.6         |
| playway school near me with fees | 1      | 3     | 2.7          |
| thane schools                    | 1      | 2     | 113.0        |
| playgroup for kids near me       | 1      | 1     | 5.0          |

All 14 non-brand local queries that received at least one click in the 28 days. Queries with impressions but no clicks are not listed here.

### 4.3 The pages built to win new parents rank on page 2–3

| Page                             | Clicks | Impr. | CTR   | Avg position |
|----------------------------------|--------|-------|-------|--------------|
| /best-preschool-near-me-in-thane | 2      | 593   | 0.34% | 28.3         |
| /preschool-admissions            | 3      | 1,066 | 0.28% | 25.4         |
| /kindergarten                    | 2      | 193   | 1.04% | 21.5         |
| /playgroup                       | 9      | 568   | 1.58% | 19.3         |
| /about                           | 1      | 344   | 0.29% | 18.0         |
| /nursery                         | 3      | 620   | 0.48% | 13.5         |
| /play-school-near-me             | 3      | 401   | 0.75% | 10.1         |
| / (homepage)                     | 138    | 7,557 | 1.83% | 7.0          |

Informational pages earn many impressions but few clicks: `/national-symbols-of-india-for-kids` 5,093 impressions (0.51% CTR), `/pre-kg-age-guide` 3,234 (0.34%), `/36-motivational-thoughts-of-the-day-for-kids` 3,046 (0.62%). Low CTR at positions 8–10 means these results are just below the first-page fold; stronger titles and better internal links can lift them.

**A redirected page still collects impressions.** `/summer-camp` redirects to `/programmes` but received 568 impressions at position 60.1. URL Inspection reports it as *"Indexed, though blocked by robots.txt"*: Google cannot see the redirect because robots.txt forbids it to look (finding CRAWL-1).

### 4.4 URL Inspection (10 pages)

| Page                                             | Coverage                                     | Last crawled           | Rich results detected             |
|--------------------------------------------------|----------------------------------------------|------------------------|-----------------------------------|
| /                                                | Submitted and indexed                        | 18 Sep                 | Review snippets                   |
| /playgroup                                       | Submitted and indexed                        | 13 Sep                 | Breadcrumbs                       |
| /preschool-in-manpada-thane                      | Submitted and indexed                        | 13 Sep                 | Breadcrumbs, Review snippets (×3) |
| /summer-camp                                     | <b>Indexed, though blocked by robots.txt</b> | 13 Sep (fetch blocked) | —                                 |
| /blog/signs-of-good-preschool-thane              | Submitted and indexed                        | 18 Sep                 | Breadcrumbs                       |
| /play-school-near-majiwada                       | Submitted and indexed                        | 29 Aug                 | Breadcrumbs, Review snippets      |
| /happy-times                                     | Submitted and indexed                        | 13 Sep                 | Breadcrumbs                       |
| /10-spring-gardening-activities-for-preschoolers | Submitted and indexed                        | 17 Sep                 | Breadcrumbs                       |
| /blog/navratri-dussehra-2026-for-kids            | Submitted and indexed                        | 22 Sep                 | Breadcrumbs                       |
| /playgroup-in-dhokali                            | Submitted and indexed                        | 8 Sep                  | Breadcrumbs, Review snippets      |

Indexing is not the bottleneck: every page tested is indexed, including pages Google can only find through the sitemap. The detected "Review snippets" confirm that Google is reading the self-serving review markup

described in finding SD-1.

## 4.5 Real-user speed (CrUX, phones, 25 Aug–21 Sep 2026)

The site **fails** Core Web Vitals on phones: LCP 3.66 s (needs improvement), INP 375 ms (needs improvement), CLS 0 (good). Supporting metrics: FCP 3.16 s (poor), TTFB 2.13 s (poor; 37% of visits poor). Full detail in section 11.

## 5. Crawling, indexing, robots.txt, sitemap and redirects

### CRAWL-1 robots.txt stops Google from seeing redirects and noindex tags

High

**What we found.** robots.txt blocks URLs that 301-redirect, and it blocks every noindex page. Because `Disallow: /ad` is a prefix rule, it also blocks `/admission`, `/admissions`, `/admission-procedure` and `/admissions-24-25`, which all redirect to `/preschool-admissions` (and `/admin`, which redirects to the homepage).

**Evidence.** Live test: `/admissions`, `/admission`, `/kids-activity-club`, `/summer-camp` and `/author/rainbow-preschools` all return 301 and are Disallowed. All 10 noindex pages (`/ad`, `/ad-google`, `/flyer`, `/join-now`, `/gsc`, `/GSC`, `/dummy`, `/RIS`, `/ris`, `/ris-11th`) are also Disallowed. GSC: `/summer-camp` is "Indexed, though blocked by robots.txt" with 568 impressions in 28 days. Code: the guard script `scripts/check-robots-noindex-sync.ts` (lines 9–15) requires this pairing. Google: "For the noindex rule to be effective, the page or resource must not be blocked by a robots.txt file."

**Why it matters.** Old URLs with links pointing at them cannot pass their value to the new pages, and blocked pages can stay in Google's index showing as bare URLs.

**Fix.** Prompt P1-2.

### CRAWL-2 Sitemap dates are one fixed date for most pages

High

**What we found.** 57 of 86 sitemap URLs show `<lastmod>2026-04-24`, including pages first published later (for example `/national-symbols-of-india-for-kids`, published 4 Aug 2026).

**Evidence.** Live sitemap.xml. Code: `shared/site-freshness.ts` line 17 `LAST_UPDATED_ISO = "2026-04-24"` feeds `shared/sitemap-entries.ts` 175 and 195. Google: "Google uses the `<lastmod>` value if it's consistently and verifiably accurate"; "Google ignores `<priority>` and `<changefreq>` values."

**Why it matters.** An inaccurate date teaches Google to ignore lastmod for the whole site, so real updates are discovered more slowly.

**Fix.** Prompt P3-3.

### CRAWL-3 Every URL's raw HTML (before JavaScript) says 'canonical = homepage, index'

Medium

**What we found.** Visitors and any crawler not on the site's bot list receive the same starting HTML for every URL, declaring the homepage as canonical and `robots: index, follow`, until JavaScript replaces them. On some pages JavaScript never corrects it.

**Evidence.** Live test with a Chrome user agent: `/ad`, `/ad-google`, `/join-now`, `/flyer`, `/gsc`, `/privacy` and `/terms` all return `<link rel="canonical" href="https://www.rainbowpreschools.com/">` and `index, follow`. After rendering, `/ad`, `/ad-google`, `/flyer`, `/gsc` and `/join-now` still carry `canonical = homepage`; `/join-now` ends up with two conflicting robots tags. Code: `client/index.html` lines 9, 14, 21, 31; `client/src/components/seo.tsx` 66-71 only updates an existing canonical.

**Why it matters.** Google's own testing tools (URL Inspection live test, Rich Results Test) and crawlers not on the list (for example BingPreview, Storebot-Google) see wrong signals.

**Fix.** Prompt P3-2 (server injects the correct title, description, canonical and robots into the starting HTML for each URL).

### CRAWL-4 /privacy and /terms: Google sees 'index', visitors' browsers see 'noindex'

Low

**What we found.** The bot HTML says `index, follow`; after JavaScript runs the page says `noindex, nofollow`. Neither is in the sitemap.

**Evidence.** Crawl + render of both pages.

**Why it matters.** Mixed signals; decide one state.

**Fix.** Prompt P1-5.

### CRAWL-5 Four '-fast' duplicate programme pages are indexable and point to the wrong host

Medium

**What we found.** `/playgroup-fast`, `/nursery-fast`, `/kindergarten-fast` and `/daycare-fast` (and their .html versions) return 200 with no `noindex` and a canonical on the non-www host, e.g. `https://rainbowpreschools.com/playgroup`, which itself redirects. `/kindergarten-fast` says "Ages 3.5-5 Years".

**Evidence.** Live test with Googlebot and Chrome user agents.

**Why it matters.** Duplicate versions of the core programme pages with a canonical that goes through a redirect.

**Fix.** Prompt P1-6.

**CRAWL-6****Many old URLs redirect to the homepage instead of a matching page**

Medium

**What we found.** Examples verified live: `/centres` → `/`, `/thank-you` → `/`, `/thane/aggarwal/` → `/` (the Manpada centre's old page, still linked from ProEves), `/thane/kasarwadavli/` → `/`. Also `/programme` returns 404 and is linked from Edustoke.

**Evidence.** Code: 50 entries in the redirect map in `server/redirects.ts` have target `"/"`, and pattern rules send more there, e.g. every `/thane/*` URL except `/thane/dhokali` (lines ≈770–772), plus `/navi-mumbai/*`, `/mumbai/*`, `.php` and `/wp-*` URLs. Live tests on 23 Sep.

**Why it matters.** Google treats irrelevant redirects to the homepage like a missing page (a "soft 404"), so any value from old links is lost.

**Fix.** Prompt P6-3.

## Other crawl facts

- **OK** All 86 sitemap URLs return 200, are indexable and are not blocked (crawl).
- **OK** 546 redirects, all 301 (one 308), with no chains or loops (code review, computed).
- **OK** `http://` and non-`www` requests 301 to `https://www` (live test). HSTS is on: `max-age=63072000; includeSubDomains`.
- **OK** Unknown URLs return a real 404 to both Google and visitors (live test: `/this-page-does-not-exist-xyz`).
- **Low** Trailing-slash versions return 200 instead of redirecting (e.g. `/about/` → 200 with canonical `/about`). Mixed-case URLs return 404 (`/About`, `/PLAYGROUP`). The canonical tag handles the first; the second only matters if someone links with capitals.
- **Low** Search Console still records impressions for host variants (`http://www...` 84, `https://rainbowpreschools.com/` 119) even though they redirect. This clears on its own.
- **Low** robots.txt rule `Disallow: /*?utm_` only matches when `utm_` is the first parameter, and hides the redirect described in ANA-1.

## 6. What Google sees vs what parents see

The server checks who is asking. Googlebot, Bingbot, AI crawlers and some others get a simplified HTML page built by `server/bot-ssr.ts` from `server/ssr-pages.ts`. Parents get the React app. Google's own documentation says: *"Dynamic rendering is a workaround and not a recommended solution, because it creates additional complexities and resource requirements."* It is not treated as cloaking *"as long as your dynamic rendering produces similar content."* On this site the two versions differ substantially.

## REN-1 The two versions differ in length, images, headings and titles

Critical

**What we found.** On many pages Google gets far fewer words than parents see. Google's copy contains no images on 83 of 88 indexable pages. The H1 differs on 23 pages (and one page has no H1 for visitors), the title on 12 and the meta description on 36.

**Evidence.** Crawl (as Googlebot) vs render (as a visitor), all 98 pages. Selected pages below; every page is in Appendix A. Counting method: the Google figure counts all text in the HTML, including collapsed sections; the visitor figure counts only text visible after loading (collapsed FAQ answers are not counted). Where Google's figure is lower, the gap is therefore real or larger.

**Why it matters.** Google ranks the version it sees. Thin bot pages rank as thin pages; large differences between versions are the pattern Google's guidance warns about.

**Fix.** Short term: prompts P3-1 and P3-2. Long term: replace dynamic rendering with real server-side rendering or prerendering, so one HTML serves everyone.

| Page                                             | Words in Google HTML | Visible words for visitors (desktop) | Visible words for visitors (mobile) | Images in Google HTML |
|--------------------------------------------------|----------------------|--------------------------------------|-------------------------------------|-----------------------|
| /happy-times                                     | 121                  | 1015                                 | 1007                                | 0                     |
| /holi-activities-for-kids                        | 158                  | 2769                                 | 2761                                | 0                     |

| /best-preschool-near-me-in-thane *               | 1975                 | 653                                  | 409                                 | 0                     |
| /preschool-in-manpada-thane *                    | 1046                 | 563                                  | 559                                 | 0                     |
| /playgroup-in-manpada *                          | 686                  | 411                                  | 407                                 | 0                     |
| /10-spring-gardening-activities-for-preschoolers | 565                  | 125                                  | 117                                 | 0                     |

\* These pages have collapsed FAQ answers that the visible-word count does not include (e.g. about 1,700 words on /best-preschool-near-me-in-thane and 730 on /preschool-admissions), so for them the two versions are closer than the numbers suggest. On /10-spring-gardening-activities-for-preschoolers the visitor page really is thinner (finding REN-3).

## H1 differences (23 pages)

## REN-2 FAQ answers exist only inside code on 18 pages

Medium

**What we found.** FAQ structured data is present, but the questions and answers are not visible text in Google's copy of the page.

**Evidence.** Code review (exact-text match): /playgroup 7 of 7, /nursery 8/8, /kindergarten 8/8, /preschool-admissions 8/8, /best-preschool-near-me-in-thane 10/10, /play-school-near-me 17/20, /faqs 30/30, each /playgroup-in-\* page 5/5, /national-symbols-of-india-for-kids 12/12, /holi-activities-for-kids 6/6, /playgroup-near-ghodbunder-road 5/5, /play-school-near-majiwada 5/5, /play-school-near-naupada 5/5, /play-school-near-ghodbunder-road 4/5 (the /play-school-near-\* pages show reworded Q&A).

**Why it matters.** Markup must describe visible content. AI crawlers receive the same bot HTML, so these answers are also invisible to them as page text.

**Fix.** Prompt P3-1.

### REN-3 One article shows the homepage's title and canonical to visitors

High

**What we found.** `/10-spring-gardening-activities-for-preschoolers` : visitors get the homepage title, description and canonical, no H1, and 125 words. Google gets the correct title and 565 words.

**Evidence.** Render (desktop and mobile) and all 6 Lighthouse runs show canonical = `https://www.rainbowpreschools.com/`. The page has 222 impressions at position 40.3 (GSC).

**Why it matters.** Any tool or search engine that renders JavaScript sees a duplicate of the homepage.

**Fix.** Prompt P1-4.

### REN-4 Google's testing tools and speed tools see a different version from Googlebot

Medium

**What we found.** The mobile Google-InspectionTool (used by URL Inspection live test and the Rich Results Test) gets the React starting page, not the bot HTML. Anything with "lighthouse" in its user agent (PageSpeed Insights) gets the bot HTML.

**Evidence.** Live test: Google-InspectionTool received 10-22 words and no H1. Lab: the bot HTML scored 78 on mobile (LCP 0.9 s) while the real app scored 50 (LCP 5.0 s). Code: `server/bot-ssr.ts` line 61 lists "lighthouse".

**Why it matters.** Diagnostics mislead: PageSpeed Insights overstates the real speed, and live tests don't show what Google indexes.

**Fix.** Prompt P3-5.

## 7. Internal linking and site architecture

### LINK-1 Blog, article and several local pages get no links in Google's copy

Critical

**What we found.** In the HTML Google receives, 62 of 88 indexable pages have no internal link pointing to them from any other page. This includes all 30 `/blog/` posts, 22 of the 23 root-level articles (only `/national-symbols-of-india-for-kids` gets one link), `/faqs`, `/testimonials`, `/top-preschools-in-thane`, `/preschool-readiness-quiz`, `/pre-kg-age-guide`, `/playgroup-in-dhokali` and four locality pages.

**Evidence.** Crawl (link graph of Google's copy). Code: the bot `/blog` page lists post titles as plain text without links ( `server/ssr-pages.ts` 867-883, rendered by `bot-ssr.ts` 245-250); in-article links are stripped ( `ssr-pages.ts` 52, 82, 118); `/about` lists centre URLs as text, e.g. "`/preschool-in-manpada-thane`" (line 639).

**Why it matters.** Google finds these pages only through the sitemap and passes them almost no internal authority. Informational pages then under-perform (see 4.3).

**Fix.** Prompts P2-1 to P2-4.

#### LINK-2 Four pages have no internal links in either version

High

**What we found.** `/play-school-near-ghodbunder-road` , `/play-school-near-majiwada` , `/play-school-near-naupada` , `/playgroup-near-ghodbunder-road` .

**Evidence.** Crawl and render: zero inbound links in both views.

**Why it matters.** True orphans. Parents cannot reach them by browsing; Google sees them as unimportant.

**Fix.** Prompt P2-4.

#### LINK-3 The `/blog` page (visitor version) links to 116 URLs that redirect

High

**What we found.** The visitor `/blog` grid lists every old article, including 116 that 301-redirect (8 of them straight back to `/blog`). One title appears twice.

**Evidence.** Render: 121 internal link targets in the visitor version return 301; 116 of them are linked from `/blog` (and `/author/rainbowpreschools`, which redirects to `/blog`). Code: `client/src/pages/blog.tsx` 60-69 maps every entry of the 865 KB `LegacyPagesData` file with no redirect filter.

**Why it matters.** Wastes crawl effort, sends parents through redirects, and ships a large data file to every `/blog` visitor.

**Fix.** Prompt P1-3.

#### LINK-4 Broken and looping internal links

Medium

**What we found.** Three links return 404 and one loops back to its own page.

**Evidence.** Live test: `/blog/parents-prepare-child-school` (404, linked from `/kindergarten`), `/blog/preschool-vs-daycare` (404, linked from `/nursery`), `/preschool-near-panch-pakhadi-thane-west` (404, linked from `/nursery`). Google's copy of `/nursery` links to `/nursery-school-admission-thane` , which redirects back to `/nursery`. Code: `kindergarten-landing.tsx` 637; `nursery-landing.tsx` 647, 782; `ssr-pages.ts` 754.

**Why it matters.** Dead ends for parents and for Google.

**Fix.** Prompt P1-3.

#### LINK-5 'Related articles' always shows the same two posts

Medium

**What we found.** Every blog post links to the same first two posts rather than related topics.

**Evidence.** Code: `client/src/pages/blog-post.tsx` 1541-1543 ( `.filter(...).slice(0, 2)` ).

**Why it matters.** Misses the strongest way to connect topics for readers and for Google.

**Fix.** Prompt P2-3.

## 8. On-page SEO

**Working:** every indexable page has exactly one title, one meta description, a viewport tag, `lang="en"`, Open Graph and Twitter tags. No two indexable pages share a title or description in Google's copy (duplicates exist only among noindex campaign pages). No image in the visitor version is missing alt text.

### ONP-1 20 titles are longer than 60 characters

Low

**What we found.** 20 titles in Google's copy exceed 60 characters (Google usually truncates around that length). Longest: `/blog/raksha-bandhan-2026-for-kids` at 71.

**Evidence.** Crawl. List below.

**Why it matters.** The end of the title, often the brand or key phrase, is cut off in results.

**Fix.** Prompt P3-4.

| Page                                                                       | Title length |
|----------------------------------------------------------------------------|--------------|
| <code>/happy-times</code>                                                  | 61           |

| <code>/trends-in-early-childhood-education</code>                          | 63           |

### ONP-2 Three meta descriptions are too long

Low

**What we found.** /blog/raksha-bandhan-2026-for-kids (235 characters), /blog/ganesh-chaturthi-for-kids (184), /blog/independence-day-for-kids (173).

**Evidence.** Crawl. Code: these are standalone HTML pages the length-check script does not cover; for Raksha Bandhan, the script checks `blog-pages/raksha-bandhan-2026-for-kids/index.html` but the server serves `public/raksha-bandhan-redesign/index.html`.

**Why it matters.** Truncated snippets; the guard script gives false assurance.

**Fix.** Prompt P3-4.

### ONP-3 The homepage has two different titles, three different descriptions and two different H1s

Medium

**What we found.** Starting HTML title: "Rainbow Preschool Thane | Playschool, Nursery & Kindergarten in Thane". React and Google title: "Preschool in Thane | Rainbow Preschool International". The starting HTML, the React page and Google's copy each carry a different meta description. Google's H1: "Trusted Preschool in Thane Since 2007"; visitors' H1: "Rainbow Preschool Playschool · Nursery · Kindergarten".

**Evidence.** Crawl + render + `client/index.html` line 26. The repo's own check `scripts/check-shell-seo-sync.ts` failed when run on commit d941ef7 and is not part of the deploy checks ( `scripts/predeploy.sh` ).

**Why it matters.** Mixed signals for the most important page.

**Fix.** Prompt P3-2.

### ONP-4 Five /playgroup-in-\* pages and /playgroup-near-ghodbunder-road are 84–86% identical in Google's copy

Medium

**What we found.** /playgroup-in-manpada, -kalwa, -kasarvadavali, -dhokali, -anand-nagar and /playgroup-near-ghodbunder-road share most of their text.

**Evidence.** Crawl: 5-word-sequence overlap between each pair is 0.84–0.86 (1.0 = identical). They also overlap in purpose with the /preschool-in-\*-thane centre pages.

**Why it matters.** Near-duplicate pages compete with each other and look templated.

**Fix.** Prompt P6-2.

## ONP-5 Keyword ownership for 'preschool in thane' is undecided

Medium

**What we found.** Four internal sources assign the phrase to three different pages (/best-preschool-near-me-in-thane, /play-school-near-me and the homepage); the homepage uses it in both its title and H1.

**Evidence.** Code review: seo\_strategy.md 29, replit.md 55, docs/seo-topic-url-map.md 23, scripts/check-no-title-cannibalisation.ts 24 vs 110-112.

**Why it matters.** Pages compete for the same query. This is a business decision, not a code fix.

**Fix.** Decide one owner page and update the documents and the guard script. (For reference: the query "pre school in thane" averaged position 8.7 over 28 days; Search Console data by query and page together was not available.)

## 9. Structured data (schema)

### SD-1 Self-serving reviews and a Google Business rating copied into markup

Critical

**What we found.** All 6 centre pages publish Review markup written by "Rainbow Preschool Curriculum Team" about its own centres. 26 pages publish an AggregateRating of 4.9 from 487 reviews, taken from Google Business Profile.

**Evidence.** Crawl (26 pages with AggregateRating; 6 with Review). URL Inspection detects "Review snippets" on /, the Manpada page, /play-school-near-majiwada and /playgroup-in-dhokali. Code: server/ssr-pages.ts 415-440 and 541-550 (reviews), 378-384, 491-496, 535-540, 1353-1359 (ratings); shared/verified-rating.ts 25-32; client/src/pages/home.tsx 165-171. Google's review-snippet guidelines: "If the entity that's being reviewed controls the reviews about itself, their pages that use LocalBusiness or any other type of Organization structured data are ineligible for star review feature." and "Don't aggregate reviews or ratings from other websites."

**Why it matters.** This is the pattern that leads to a manual action for spammy structured markup, which can remove rich results site-wide.

**Fix.** Prompt P1-1. Keep the rating as visible text with a link to your Google reviews.

## SD-2 Up to three different business entities per centre, with conflicting details

High

**What we found.** Each centre is described by up to three separate schema entities with different IDs. The centre pages give every centre PIN 400607 and the head-office phone; other pages give centre-specific PINs and phones; the visitor version of the /playgroup-in-\* pages gives every centre PIN 400610 (Google's copy of those pages has no PIN). Result: all six centres have conflicting PINs somewhere on the site.

**Evidence.** Crawl and render (JSON-LD). Code: `shared/centre-data.ts` 185–240; `server/ssr-pages.ts` 474–478, 506, 516, 1645–1650; `client/src/components/landing/playgroup-landing-template.tsx` 81, 87; `client/src/components/seo.tsx` 189.

**Why it matters.** Google cannot tell which details are right, which weakens each centre's local presence.

**Fix.** Prompt P4-1.

## SD-3 Schema type and property errors

Medium

**What we found.**

- **Preschool** is not a type of LocalBusiness on schema.org (its parents are EducationalOrganization and CivicStructure), so `priceRange` and local-business features don't apply. Adding **ChildCare** (a LocalBusiness type) fixes this.
- Logo and image URLs return 404: `/images/optimized/logo.webp` and `/logo.png` (live test).
- **FAQPage** is on 77 indexable pages, and **HowTo** on 3. Google stopped showing FAQ rich results on 7 May 2026 (documentation removed 15 June 2026) and removed HowTo rich results in August–September 2023, so neither produces a search feature any more.
- An automatic Article entity is added to commercial and legal pages (e.g. /terms, /privacy) without a publish date; `reviewedBy` is used on Article (it belongs to WebPage).
- Two BreadcrumbLists on /holi-activities-for-kids and /national-symbols-of-india-for-kids; `isPartOf` points to a WebSite @id that is never defined.
- The 25 blog posts built by the SSR template all use the same image ( `/og-image.jpg` ).

**Evidence.** schema.org/Preschool (checked 23 Sep); Google FAQ documentation notices of 8 May and 15 June 2026; Google's HowTo announcements of Aug and 14 Sep 2023; code review section 7 ( `ssr-pages.ts` 387–392, 1499, 2393; `centre-data.ts` 194–195; `bot-ssr.ts` 211–228).

**Why it matters.** Invalid or irrelevant markup adds noise and can hide the markup that matters.

**Fix.** Prompt P4-1.

#### SD-4 Four different sets of social profiles in the markup and footer

Medium

**What we found.** Organization sameAs and the footer link to different Facebook, Instagram and YouTube addresses (e.g. facebook.com/rainbowpreschoolthane, /rainbowpreschools and /RainbowPreschoolsInternational).

**Evidence.** Code: `ssr-pages.ts` 359–365, `seo.tsx` 141–144, `home.tsx` 151–155, `footer.tsx` 34, 44, 54. Only the YouTube channel could be verified (200); Facebook and Instagram sit behind login walls.

**Why it matters.** Google and AI systems use sameAs to confirm the organisation's identity; conflicting profiles dilute it.

**Fix.** Confirm the real handles, then Prompt P4-3.

## 10. Local SEO and NAP consistency

NAP = name, address, phone. Google, directories and AI assistants compare these details across the web; consistent details build trust in each centre's listing.

| Centre        | PIN (centre-data / other pages) | PIN on centre page schema | Phone on centre page schema   | Centre phones elsewhere on site                          | Map pin distance from the site's own Google Maps link |
|---------------|---------------------------------|---------------------------|-------------------------------|----------------------------------------------------------|-------------------------------------------------------|
| Manpada       | 400610                          | 400607                    | +91 82915 68972 (head office) | 022-47762019; 93218 39367 and 93212 39367 (two versions) | 2.08 km                                               |
| Hariniwas     | 400602                          | 400607                    | +91 82915 68972               | 91365 78589                                              | 0.57 km                                               |
| Anand Nagar   | 400601                          | 400607                    | +91 82915 68972               | 98337 81550; 91524 89789                                 | 4.67 km                                               |
| Dhokali       | 400607                          | 400607                    | +91 82915 68972               | 93212 38375                                              | 0.92 km                                               |
| Kalwa         | 400605                          | 400607                    | +91 82915 68972               | 74003 27905                                              | 3.33 km                                               |
| Kasarvadavali | 400615                          | 400607                    | +91 82915 68972               | 022-40062128; 87798 00068                                | 2.10 km                                               |

Sources: `shared/centre-data.ts` 47–160 and 698, 710; crawl JSON-LD; distances computed between the site's schema coordinates and the coordinates of the Google Maps short links the site itself publishes.

#### LOC-1 Opening hours conflict across six sources

Medium

**What we found.** Mon–Sat 8:00–18:00 (schema, `llms.txt`); Mon–Sat 9:00–18:00 (playgroup template schema; footer; contact page); Mon–Fri class batches 8:30–11:30 and 12:30–3:30 (programme copy); IndianYellowPages 9:30–6:30.

**Evidence.** Code review NAP-03; directory fetch 23 Sep.

**Why it matters.** Parents and Google get different answers to 'is it open now?'.

**Fix.** Decide office hours and class hours per centre (human task), then Prompt P4-2.

## LOC-2 The Manpada map on the site is a placeholder

Medium

**What we found.** The embedded map on /preschool-in-manpada-thane uses a made-up place ID ( 0x0:0x0 ) and a timestamp of 1234567890 , centred 0.67 km from the site's own Manpada coordinates.

**Evidence.** Render: iframe src captured on 23 Sep. Code: shared/centre-data.ts 52.

**Why it matters.** Parents may be shown the wrong location.

**Fix.** Prompt P4-2.

## LOC-3 Programme ages conflict

Medium

**What we found.** Kindergarten is described as 3.5–5.5 years, 3.5–5 years, and 4–6 years in different places.

**Evidence.** Code: SSR-pages.ts 763, 1022, 1065; shared/programme-data.ts 31-37; public/kindergarten-fast.html 6.

**Why it matters.** Confuses parents and AI answers.

**Fix.** Confirm the correct ages (human task), then Prompt P4-2.

## Manual checklist: Google Business Profiles (could not be read automatically)

- For each of the 6 profiles, confirm the name, full address with PIN, phone, hours, primary category ("Preschool") and website URL (use the centre page, e.g. /preschool-in-manpada-thane, not the homepage).
- Move each map pin to the building entrance, then copy the exact coordinates into the site data (Prompt P4-2).
- The Google Maps place ID in the site's Organization markup ( ChIJs8uL-1-5vjCRPwjKJY0MaA0 ) does not match the Manpada listing's own ID; check which profile it opens and replace it with the correct one.
- Check that the 4.9 rating / 487 reviews figure used on the site still matches the profiles (it was last recorded in code on 23 Jun 2026).

## 11. Page speed and Core Web Vitals

### 11.1 Real users (CrUX, phones, 25 Aug–21 Sep 2026, whole site)

| Metric                        | 75th percentile | Rating            | Good / needs improvement / poor |
|-------------------------------|-----------------|-------------------|---------------------------------|
| LCP (largest content visible) | 3.66 s          | Needs improvement | 51% / 28% / 21%                 |
| INP (response to taps)        | 375 ms          | Needs improvement | 56% / 25% / 18%                 |
| CLS (layout shift)            | 0               | Good              | 92% / 5% / 3%                   |
| FCP (first content)           | 3.16 s          | Poor              | 29% / 43% / 28%                 |
| TTFB (server response)        | 2.13 s          | Poor              | 12% / 51% / 37%                 |

Overall: **fails** Core Web Vitals (1 of 3 passing). CrUX has phone data only for this site. For image-based LCP, CrUX splits the time into server response 2.1 s, image discovery 0.18 s, image download 0.24 s and

rendering 0.30 s (75th percentiles), so the server wait is by far the largest piece. 93 of the 98 pages were served with `cache-control: no-store` (the 5 standalone blog posts use a 1-hour cache), so almost every page view goes back to the origin server; the responses carry `via: 1.1 google`, meaning the app is served from Google Cloud behind Cloudflare. The hosting region could not be confirmed from outside.

## 11.2 Lab tests (Lighthouse 13.5, median of 3 runs, real Chrome user agent)

| Page                                  | Mobile score | Mobile LCP | Mobile TBT | CLS (mobile / desktop) | Desktop score |
|---------------------------------------|--------------|------------|------------|------------------------|---------------|
| /                                     | 50           | 5.0 s      | 2,570 ms   | 0.000 / 0.016          | 80            |
| /playgroup                            | 47           | 6.7 s      | 1,926 ms   | 0.000 / 0.000          | 83            |
| /preschool-in-manpada-thane           | 51           | 5.6 s      | 1,508 ms   | 0.039 / 0.000          | 89            |
| /best-preschool-near-me-in-thane      | 52           | 5.0 s      | 1,779 ms   | 0.000 / 0.141          | 88            |
| /blog/navratri-dussehra-2026-for-kids | 44           | 11.3 s     | 1,131 ms   | 0.000 / 0.004          | 80            |
| /10-spring-gardening-activities-...   | 36           | 4.7 s      | 1,359 ms   | 0.500 / 0.275          | 85            |
| /contact                              | 38           | 6.8 s      | 6,738 ms   | 0.000 / 0.500          | 56            |
| /gallery                              | 54           | 4.8 s      | 1,441 ms   | 0.000 / 0.000          | 93            |

Tests ran from a US cloud server through a proxy; use for relative comparison. Field data in 11.1 is authoritative. SEO score was 100 on all pages except /10-spring-gardening (92), Accessibility 82–96, Best Practices 73 on all.

### PERF-1 Tracking scripts are the heaviest part of every page

High

**What we found.** On the homepage (mobile, first load) 45 requests and 1.85 MB load before any interaction; scripts are 1.16 MB of that. Google tags make up 49% of script bytes and Meta 30%; the site's own code is 20%. Three separate Google tag payloads (193 KB, 167 KB, 203 KB) and two Meta Pixel IDs loaded on every page tested.

**Evidence.** Lab (Playwright network capture and Lighthouse unused-JavaScript audit: 127 KB, 72 KB and 88 KB unused in the three Google tags).

**Why it matters.** Slows pages on phones and contributes to the INP of 375 ms (needs improvement).

**Fix.** Prompt P5-2.

### PERF-2 /contact loads a 3D map library on every visit

High

**What we found.** `three.js` (190 KB) downloads and runs on every /contact load; mobile Total Blocking Time is 6.7 s. The library is installed from an unreleased development branch.

**Evidence.** Lab. Code: `client/src/pages/contact.tsx` 11; `interactive-3d-map.tsx` 14; `package.json` 98 (`github:mrdoob/three.js#dev`).

**Why it matters.** The contact page is where parents act; it is the slowest page tested.

**Fix.** Prompt P5-3.

### PERF-3 Every inner app page downloads the homepage hero image first

Medium

**What we found.** The shared starting HTML preloads `hero-banner-1.webp` at high priority on every URL; Chrome recorded it as the largest paint on several inner pages.

**Evidence.** Lab (all 36 inner-page runs downloaded it). Code: `client/index.html` 58–60, 152–155.

**Why it matters.** Competes with each page's real content for bandwidth.

**Fix.** Prompt P5-4.

### PERF-4 Very large media files

Medium

**What we found.** A 13.5 MB walkthrough video autoplays with no poster image on `/play-school-near-me`, `/best-preschool-near-me-in-thane` and `/preschool-admissions` (and the noindex `/ad` and `/flyer`) and bypasses the CDN cache. The Independence Day post loads ten JPGs of 1.8–3.0 MB each inline. `student-girl.webp` is 417 KB at 3375×4219 px but shown at 285×346.

**Evidence.** Code review section 10; Lab (409,527 bytes of possible savings on `student-girl.webp`; 1.0–1.4 MB image savings on `/gallery`).

**Why it matters.** Heavy pages on mobile data.

**Fix.** Prompt P5-5.

### PERF-5 Layout shift on some pages

Low

**What we found.** The footer shifts by 0.5 on `/10-spring-gardening...` (mobile) and `/contact` (desktop); the header shifts by 0.141 on `/best-preschool-near-me-in-thane` (desktop).

**Evidence.** Lab. Field CLS for the site is good (0), so this affects few real visits.

**Why it matters.** Minor.

**Fix.** Prompt P5-5 (add width and height to the 21 images without them).

## 12. Content quality, E-E-A-T and freshness

**Working:** the `/blog/` posts are long and specific to Indian parents (22 of 30 have 1,400–2,400 words in the visitor version); seasonal posts are timely; Ganesh Chaturthi (17 clicks, 1,012 impressions) and Raksha Bandhan (7 clicks, 1,513 impressions) are among the best-performing pages in Search Console.

### CON-1 Out-of-date admission year on 21 pages

Medium

**What we found.** 21 pages show "2025-26" to visitors (e.g. /pre-kg-age-guide, /sports-day-activities-for-kindergarten, /36-motivational-thoughts-of-the-day-for-kids); one card on /blog still says "2024-25". The rest of the site says 2026-27.

**Evidence.** Render text search. Code: `client/src/components/legacy-landing-page.tsx` 352; `blog-internal-links.tsx` 15.

**Why it matters.** Looks neglected to parents; conflicting dates weaken trust signals.

**Fix.** Prompt P6-1.

### CON-2 Claims that cannot be substantiated

Medium

**What we found.** Google's copy of /best-preschool-near-me-in-thane, /preschool-admissions and /playgroup says "over 1,00,000 alumni across 6 generations of (Thane) families". Six generations cannot be true for a school founded in 2007. The same figure is described as families, alumni and learners in different places. Directories list the founding year as 2012 (IndianYellowPages, ExportersIndia) against the site's 2007.

**Evidence.** Crawl text; code `ssr-pages.ts` 564, 719, 959, 1014; directory fetch 23 Sep.

**Why it matters.** Unverifiable claims undermine trust with parents, Google's quality systems and AI answers.

**Fix.** Prompt P6-1 (claims), manual directory fixes (section 14).

### CON-3 A self-ranked 'Top 10 preschools in Thane' page

Medium

**What we found.** /top-preschools-in-thane ranks Rainbow #1 (4.9★, 487 reviews) above competitors including Podar Jumbo Kids (4.9★, 988+ reviews). It lists six ranking criteria but gives no scores, sources or date for the competitor ratings; its "Last updated" date is the site-wide April 24, 2026 constant.

**Evidence.** Code: `ssr-pages.ts` 1334. GSC: 46 impressions, position 17.4.

**Why it matters.** Self-promotional comparison pages are a trust risk.

**Fix.** Add scores, sources and the date the competitor ratings were checked, or reframe as a neutral 'how to choose' guide.

#### CON-4 Hidden text on the homepage

Low

**What we found.** The visitor homepage contains a hidden (display:none) block: "Reviewed by Rainbow Preschool Curriculum Team — Last updated: April 24, 2026". Googlebot gets a visible version of this byline.

**Evidence.** Live test: `<div style="display:none" aria-hidden="true">` . Code: `server/homepage-freshness.ts` 67-69.

**Why it matters.** Hidden text is against Google's spam policies, and this version is what Google's testing tools and crawlers not on the bot list receive.

**Fix.** Prompt P1-7.

## 13. AEO / GEO: readiness for AI answers and AI search

AEO (answer engine optimisation) and GEO (generative engine optimisation) are about being quoted correctly by Google's AI Overviews and AI Mode, ChatGPT, Perplexity, Claude, Gemini and similar tools. Google's own guide (updated 10 Jul 2026) says: *"You don't need to create new machine readable files, AI text files, markup, or Markdown to appear in Google Search", "Structured data isn't required for generative AI search", and "Using products like Merchant Center and Google Business Profiles can help your products and services be visible in both AI responses and other Google Search results."* In short: foundational SEO, unique content and consistent business facts matter most.

### 13.1 Crawler access test (23 Sep 2026)

| Crawler                                                                  | Result on /, a centre page and a blog post                 |
|--------------------------------------------------------------------------|------------------------------------------------------------|
| Googlebot, Bingbot, DuckDuckBot, Applebot                                | 200, full bot HTML with H1 (same content as the crawl)     |
| GPTBot, OAI-SearchBot, ChatGPT-User (OpenAI)                             | 200, full bot HTML                                         |
| ClaudeBot, Claude-SearchBot, Claude-User (Anthropic)                     | 200, full bot HTML                                         |
| PerplexityBot, Perplexity-User                                           | 200, full bot HTML                                         |
| Amazonbot, CCBot (Common Crawl), Meta-ExternalAgent, facebookexternalhit | 200, full bot HTML                                         |
| Google-InspectionTool (mobile)                                           | 200, but only the React starting page (10-22 words, no H1) |

**Working:** no AI crawler is blocked by robots.txt or Cloudflare, and all receive readable text without needing JavaScript. `/llms.txt` (5,576 bytes) and `/llms-full.txt` (15,763 bytes) exist and list centres, programmes and key pages.

### AEO-1 The facts AI tools would quote conflict across sources

High

**What we found.** Hours (8–6 vs 9–6), PIN codes, phone numbers, kindergarten ages, founding year (2007 vs 2012 on directories), the number of families, and "Thane West" vs "Thane West and Thane East" all differ between pages, llms.txt, schema and directories.

**Evidence.** Sections 10 and 14; llms.txt lines 9, 110; llms-full.txt 183.

**Why it matters.** AI assistants combine sources; when facts conflict they may quote the wrong one or avoid quoting the site.

**Fix.** Fix the source data (P4-2), regenerate llms.txt from it, then correct directories.

### AEO-2 Answers are hidden from the text AI crawlers read

Medium

**What we found.** On 18 pages the FAQ answers exist only in structured data, not as visible text in the HTML that AI crawlers receive; the bot HTML also contains no images or image captions on 83 of 88 pages.

**Evidence.** Section 6 (REN-2).

**Why it matters.** AI systems quote visible, clearly structured text.

**Fix.** Prompt P3-1.

### AEO-3 No public entity record

Low

**What we found.** No Wikidata item and no Wikipedia article exist for Rainbow Preschool International (Wikidata API searches for four name variants returned no result). Social profiles in the markup are inconsistent (SD-4).

**Evidence.** Wikidata API, 23 Sep 2026.

**Why it matters.** AI systems and Google's Knowledge Graph lean on consistent entity records to identify an organisation.

**Fix.** First make sameAs and NAP consistent. A Wikidata item is only appropriate if the organisation meets Wikidata's notability rules; do not create one otherwise.

### AEO-4 llms.txt: useful but not a ranking factor, and partly inconsistent

Low

**What we found.** llms.txt lists every centre with only the central phone number; says hours are 8:00–6:00 while the footer says 9–6; llms-full.txt links /republic-day-2026, which redirects; files last changed 16 Jul 2026.

**Evidence.** Live fetch (Last-Modified headers); code review section 4. Google's AI guide: "You don't need to create new machine readable files, AI text files, markup, or Markdown to appear in Google Search." Other AI services may read them.

**Why it matters.** Low priority for Google; worth keeping accurate for other AI tools.

**Fix.** Generate both files from the site data (P4-2).

**Not measured:** how often AI assistants currently cite RPS. To track it, run a fixed set of parent questions (for example "best preschool in Manpada Thane", "playgroup fees Thane", "preschool near Hiranandani Estate") in ChatGPT, Gemini, Perplexity and Google AI Mode each month and record whether RPS is mentioned and which facts are quoted.

## 14. Off-site: listings, citations and backlinks

**Backlinks were not measured.** Semrush returned "not enough API units" for 6 of 7 toolkits and "no plan that includes MCP access" for the seventh, so backlink counts, referring domains, anchor text and competitor comparisons are not in this report. Search Console → Links gives a free basic list.

### Directory listings checked on 23 Sep 2026

| Listing                                                   | What is wrong (compared with the site)                                                                                                                                                                             |
|-----------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Edustoke (Manpada)                                        | Phone 022-25897722 is not on the site; mobile 93128 39367 vs site 93218 39367 (digits swapped); links to <a href="https://rainbowpreschools.com/programme">rainbowpreschools.com/programme</a> , which ends in 404 |
| Edustoke (Kasarvadavali)                                  | Shows 91524 89789, which is the site's Anand Nagar number; header says "Anand Nagar"                                                                                                                               |
| ProEves (Manpada, Kasarvadavali)                          | Phones 022-25897722 and 022-25975064/65 are not on the site; links to <a href="#">/thane/aggarwal/</a> and <a href="#">/thane/kasarwadavli/</a> , which redirect to the homepage                                   |
| Kiddenz (Manpada, Kasarvadavali)                          | Manpada listing shows the head-office address and the Dhokali number (93212 38375); 76663 76407 is not on the site                                                                                                 |
| Yellow Slate                                              | One listing mixes the Anand Nagar and Hariniwas addresses; PIN 400601; unclaimed                                                                                                                                   |
| IndianYellowPages                                         | Founding year 2012 (site: 2007); hours 9:30–6:30                                                                                                                                                                   |
| ExportersIndia                                            | Founding year 2012 (site: 2007)                                                                                                                                                                                    |
| IndiaMART                                                 | Name "Rainbow Preschool International Limited"                                                                                                                                                                     |
| Justdial (6 URLs, including the one in the site's markup) | Could not be read (403). Titles show "Manpada Kalyan", a "Kon Thane" listing that is not one of the 6 centres, and two separate Manpada listings (possible duplicate)                                              |
| Sulekha                                                   | Could not be read (403); title says "Manpada, Mumbai-400607"                                                                                                                                                       |

**Fix (manual):** once the correct NAP is confirmed per centre (section 10), claim and correct each listing; ask ProEves and Edustoke to link to the matching centre page; merge or remove the duplicate Justdial listings. Prompt P6-3 adds redirects so the old links reach the right centre pages meanwhile.

## 15. Analytics, tracking and webmaster verification

### ANA-1 Campaign tracking is stripped from every URL

High

**What we found.** Any URL with `utm_` parameters is 301-redirected to the bare URL, dropping all parameters. The React forms read UTM values from the address bar, so they are always empty.

**Evidence.** Live test: `/playgroup?utm_source=test&utm_medium=x` → 301 to `/playgroup`. (`?gclid=abc` alone is kept: 200.) Code: `server/redirects.ts` 698–705; `client/src/lib/analytics.ts` 669–674.

**Why it matters.** Ad and social campaigns cannot be attributed to leads.

**Fix.** Prompt P5-2 (tracking section).

### ANA-2 Google tag requests fail on every page

Medium

**What we found.** The Google tag loads through a first-party path `/xrdb/`, and two further `/xrdb/` requests fail on every page.

**Evidence.** Render: `/xrdb/` requests aborted on all 88 indexable pages; the browser console shows a 404 error on every page. Live test: `/xrdb/anything` returns 400.

**Why it matters.** Some analytics hits may not be recorded. Verify in Google Tag Assistant before changing anything.

**Fix.** Prompt P5-2.

### ANA-3 No Bing Webmaster Tools verification or IndexNow

Low

**What we found.** No Bing verification tag or file, and no IndexNow key.

**Evidence.** Code search (client, public, server). Bing's index also feeds several AI assistants.

**Why it matters.** Missed visibility data and faster indexing on Bing.

**Fix.** Prompt P6-4.

### ANA-4 Five standalone blog posts have no analytics

Low

**What we found.** Ganesh Chaturthi, Independence Day, Navratri, Janmashtami and Raksha Bandhan pages have no Google tag.

**Evidence.** Code: zero occurrences of `gtag/googletagmanager` in those HTML files.

**Why it matters.** Traffic to some of the best-performing posts is not measured.

**Fix.** Prompt P5-2.

## 16. What is already working well

- HTTPS everywhere with HSTS; http and non-www redirect correctly in one hop.
- All 86 sitemap URLs return 200 and are indexable; all 10 inspected URLs are indexed.
- 546 redirects with no chains or loops; unknown URLs return real 404s.

- Unique titles and descriptions on every indexable page; one H1 per page in Google's copy; viewport, language and social tags present everywhere.
- No images missing alt text in the visitor version.
- Real-user layout stability is good (CLS 0).
- Search and AI crawlers are not blocked and get readable text; llms.txt exists.
- Daily average Google position moved from 15.1 (24 Aug) to 8.5–9.8 (15–22 Sep).
- The repository already has automated SEO guard scripts; several just need correcting (noted in the fix guide).

## 17. Fix guide: phased plan with Replit Agent prompts

**How to use this.** Paste one prompt at a time into Replit Agent. Each prompt names the exact files and lines found in this audit, what to change, what not to touch, and how to check the result. Ask the Agent to show you the changed lines before deploying. Do not accept "done" until the checks at the end of the prompt pass.

| Wave                      | When                                 | Prompts                                                              | Check before the next wave                                                                      |
|---------------------------|--------------------------------------|----------------------------------------------------------------------|-------------------------------------------------------------------------------------------------|
| 0: Security               | Today                                | P0-1 to P0-4                                                         | /api/contacts returns 401; GA4 events contain no names or phones                                |
| 1: Low-risk SEO fixes     | Week 1                               | P1-1 to P1-7                                                         | GSC: no new errors; robots.txt report updated; URL Inspection no longer detects Review snippets |
| 2: Links in Google's copy | Week 2-3                             | P2-1 to P2-4                                                         | Re-crawl with Googlebot user agent: every sitemap URL has at least one internal link            |
| 3: Parity and on-page     | Week 3-4                             | P3-1 to P3-5                                                         | Titles, H1s and descriptions match between versions                                             |
| 4: Local entities and NAP | Week 4-5 (after facts are confirmed) | P4-1 to P4-3                                                         | One entity per centre; Rich Results Test clean                                                  |
| 5: Speed and tracking     | Week 5-6                             | P5-1 to P5-6                                                         | Lab mobile scores; CrUX trend after 28 days                                                     |
| 6: Content and off-site   | Week 6 onward                        | P6-1 to P6-4 + manual listing fixes                                  | GSC clicks on commercial pages                                                                  |
| Later: architecture       | After wave 6 settles                 | Replace dynamic rendering with server-side rendering or prerendering | Plan as its own project                                                                         |

Human decisions needed before wave 4: correct PIN, phone, hours and map pin for each centre; kindergarten age range; which social profiles are official; which page owns "preschool in thane".

## P0-1 Lock the unauthenticated API routes

In `server/routes.ts` these routes have no authentication:

- GET `/api/contacts` (around lines 741-749) - returns all stored enquiries
- GET `/api/gsc/snapshots` (around line 778)
- POST `/api/gsc/snapshots` (around line 788)
- DELETE `/api/gsc/snapshots/:id` (around line 838) - anyone can delete data
- GET `/api/gsc/sync/status` (around line 952)
- POST `/api/gsc/sync` (around line 981)
- POST `/api/test-mcb` (around line 1020)

Also list any other `/api/` route that reads or changes stored data without a check, and include it.

Protect each one with the same `ADMIN_TOKEN` check that is already used around line 462 of `server/routes.ts` (and line 17 of `server/indra-api.ts`). Without the correct token the route must respond 401 with no data. If `/api/test-mcb` is not needed in production, remove it. Do not put the token in any client-side (browser) code. If a browser page needs this data, it must go through a server-side login. Do not change any other routes besides these (and any you listed).

When done:

1. Show me the exact lines you changed.
2. Deploy, then run: `curl -s -o /dev/null -w "%{http_code}" https://www.rainbowpreschools.com/api/contacts` → it must print 401.
3. Confirm the contact/enquiry forms on the site still submit successfully (POST routes used by forms must keep working).

## P0-2 Remove the exposed key file

The file `attached_assets/gtm-txl5cz-mmuxy-c88e18824a5c_1776404398515.json` contains a Google Cloud service-account private key. I have deleted that key in Google Cloud, created a new one, and pasted the new key into the EXISTING Replit Secret `GSC_SERVICE_ACCOUNT_KEY` (`server/gsc-sync.ts` line ~49 already reads `process.env.GSC_SERVICE_ACCOUNT_KEY` - do not rename it and do not change that code).

1. Confirm by searching that no code reads the `attached_assets` JSON file.
  2. Delete `attached_assets/gtm-txl5cz-mmuxy-c88e18824a5c_1776404398515.json`.
  3. Search the whole project for any other file containing "BEGIN PRIVATE KEY" or "private\_key" and list them (do not print their contents).
  4. Add `attached_assets/*.json` to `.gitignore`.
  5. Run the GSC sync once and confirm it works with the new key.
- Do not change anything else.

## P0-3 Stop sending personal data to Google Analytics

Google Analytics must not receive names or phone numbers.

1. In `client/src/lib/analytics.ts` remove `parent_name`, `student_name` and `phone` from every event payload (around lines 184-187, 244-245 and 366-367). Keep non-personal fields such as `centre`, `programme`, `form name`.
  2. In `public/playgroup-fast.html` (around line 232) and the matching lines in `public/nursery-fast.html`, `public/kindergarten-fast.html` and `public/daycare-fast.html`, remove `parent_name` and `phone` from the `gtag('event', ...)` call.
  3. Search the whole `client/` and `public/` folders for any other `gtag/dataLayer/fbq` call that sends a name, phone or email, and remove those fields too. List every place you changed.
- Do not change how the forms submit leads to our own server or CRM.

#### P0-4 Put the internal tools behind a login

/gsc, /GSC and /dummy are internal pages but load for anyone.

1. Protect /gsc and /GSC (client/src/App.tsx around lines 230-231, page client/src/pages/gsc-dashboard.tsx) behind a server-side password check (for example HTTP Basic Auth on those paths in server/index.ts using an ADMIN\_PASSWORD secret), so the server returns 401 before sending the page.
2. Protect /dummy (App.tsx around line 316) the same way while it is a work in progress.
3. Keep their noindex tags.
4. Test in a private window: all three paths must ask for a password. Every other page must load normally.

#### P1-1 Remove self-serving reviews and aggregated ratings from structured data

Google's rules: a business cannot mark up reviews about itself on its own site, and must not aggregate ratings from other websites (our 4.9 / 487 rating comes from Google Business Profile).

Remove from ALL structured data (JSON-LD), both server and client:

1. The "review" arrays on the centre pages: server/ssr-pages.ts centreReviews (around lines 415-440) and where they are rendered (around lines 541-550).
2. Every "aggregateRating" property: server/ssr-pages.ts around lines 378-384 (organizationSchema), 491-496 (playgroupSchema), 535-540 (localBusinessSchema), 1353-1359 (/testimonials); client/src/pages/home.tsx around lines 165-171; and any aggregateRating / Review helpers in client/src/components/seo.tsx. Search client/ and server/ for any other "aggregateRating" or "@type": "Review" and remove those too.
3. Keep the rating as normal visible text on the page if it is already shown, with a link to our Google reviews. Do not delete visible testimonials.
4. Update scripts/check-eeat-show-rating (and scripts/predeploy.sh if it calls it) so the check FAILS if any JSON-LD contains "aggregateRating" or "@type": "Review" on Organization, EducationalOrganization, Preschool or LocalBusiness nodes.

Verify: curl with a Googlebot user agent on /, /preschool-in-manpada-thane, /playgroup-in-dhokali and /testimonials; the JSON-LD must contain no "aggregateRating", no "review": and no "@type": "Review" (the visible "Reviewed by" byline and the reviewedBy property are fine). Also check the rendered visitor pages. Run npm run check.

#### P1-2 Fix robots.txt so Google can see redirects and noindex tags

Edit client/public/robots.txt (served by server/index.ts around lines 138-146):

1. DELETE these Disallow lines (these URLs 301-redirect, and Google must be able to see the redirect): /kids-activity-club, /summer-camp, /author/rainbow-preschools, /author/rainbowpreschools, /navi-mumbai/, /mumbai/, /thane/kalyan-bhiwandi.
2. DELETE the Disallow lines for noindex pages so Google can read their noindex tag: /ad, /ad-google, /ad-mtpg, /RIS, /ris, /ris-11th, /flyer, /join-now. (The prefix rule "Disallow: /ad" currently also blocks /admissions and /admission, which redirect to /preschool-admissions.)
3. DELETE Disallow: /gsc, /GSC and /dummy (they will be password-protected by P0-4; listing them publishes their address).
4. DELETE Disallow: /\*?utm\_ .
5. KEEP: User-agent: \*, Allow: /, Disallow: /api/, and the Sitemap line.
6. For every URL in NOINDEX\_SLUGS (shared/seo-config.ts lines 51-75), also send the HTTP header X-Robots-Tag: noindex from the server, in addition to the meta tag.
7. Rewrite scripts/check-robots-noindex-sync.ts so it FAILS if any noindex URL or any redirecting URL is covered by a Disallow rule (the opposite of what it checks today).

Verify after deploy: curl https://www.rainbowpreschools.com/robots.txt shows the new file; curl -I with a Googlebot user agent on /ad shows X-Robots-Tag: noindex; curl -I /admissions still returns 301 to /preschool-admissions.

### P1-3 Fix broken and redirecting internal links

Change each link to its final working URL (check server/redirects.ts for where a redirect goes). Do not create new pages.

1. client/src/pages/kindergarten-landing.tsx ~line 637: /blog/parents-prepare-child-school returns 404. Replace with the most relevant existing /blog/ post, or remove the link. Tell me what you chose.
2. client/src/pages/nursery-landing.tsx ~line 647: /blog/preschool-vs-daycare (404) → /blog/preschool-vs-daycare-difference
3. client/src/pages/nursery-landing.tsx ~line 782: /preschool-near-panch-pakhadi-thane-west (404) → /preschool-in-hariniwas-thane (the Hariniwas centre address is "Hariniwas Circle, Panchpakadi").
4. /branches links (kindergarten-landing.tsx ~620, nursery-landing.tsx ~630) → /contact
5. national-symbols-of-india.tsx ~136, 149-150: /admissions → /preschool-admissions; ~146: /republic-day-2026 → /blog/republic-day-2026
6. legacy-landing-page.tsx ~336: /best-preschool-in-thane → its redirect target in redirects.ts
7. holi-activities.tsx ~609-610: replace /brain-gym-activities-for-preschoolers and /innovative-learning-activities-for-preschoolers with their redirect targets
8. server/ssr-pages.ts ~754: remove the /nursery-school-admission-thane link from the /nursery page (it redirects back to /nursery).
9. server/seed-blog-posts.ts ~1436: /centres → /contact
10. client/src/pages/blog.tsx ~lines 60-69: only list legacyPagesData entries whose URL is NOT a key in redirectMap (use the same check as server/legacy-sitemap.ts line 33), and remove duplicate titles. Load only the titles/URLs needed for the grid, not the whole 865 KB legacy-pages-data file, if you can do it safely.
11. Create scripts/check-internal-links.ts that collects every internal href from client/src and server/ssr-pages.ts and fails if any target is in redirectMap or is not a known route (isKnownRoute). Add it to scripts/predeploy.sh.

Verify: run the new script (0 failures) and open /blog, /nursery and /kindergarten in a browser; no link should redirect or 404.

### P1-4 Fix the gardening article showing the homepage's title and canonical

For visitors, /10-spring-gardening-activities-for-preschoolers shows the homepage <title>, meta description and canonical (https://www.rainbowpreschools.com/) and has no H1. Googlebot gets the correct version.

1. Likely cause: client/src/pages/legacy-pages.tsx line ~19 has createLegacyPage("/10-spring-gardening-activitie-for-preschoolers/") - "activitie" is missing an "s" - and shared/legacy-slugs.ts line ~8 has the same typo, while the data key in shared/legacy-pages-data.ts is "/10-spring-gardening-activities-for-preschoolers/". Correct the spelling in both places (do not change the live URL).
  2. Fix it so the visitor version uses the same title, description, canonical (https://www.rainbowpreschools.com/10-spring-gardening-activities-for-preschoolers) and H1 as server/ssr-pages.ts.
  3. Check whether any other legacy article has the same problem: load every non-redirected legacy slug in a headless browser and list any whose rendered canonical is not its own URL or that has no H1.
- Show me the list and the fix.

### P1-5 Make /privacy and /terms consistent

Googlebot receives "index, follow" for /privacy and /terms, but after JavaScript runs the page says "noindex, nofollow".

Make both versions say "index, follow" (remove the client-side noIndex on these two pages in client/src/pages/legal.tsx or wherever it is set). Do not add them to the sitemap.

Verify with a browser (rendered) and with curl using a Googlebot user agent: both show index, follow.

### P1-6 Noindex the '-fast' duplicate programme pages

public/playgroup-fast.html, public/nursery-fast.html, public/kindergarten-fast.html and public/daycare-fast.html are served at /playgroup-fast, /playgroup-fast.html etc. (server/routes.ts ~218-232 and express.static in server/index.ts ~207).

1. Add `<meta name="robots" content="noindex, follow">` to each file and send X-Robots-Tag: noindex for these routes.

2. Change each canonical from `https://rainbowpreschools.com/...` to

`https://www.rainbowpreschools.com/...` (playgroup, nursery, kindergarten, happy-times).

3. In kindergarten-fast.html change "Ages 3.5-5 Years" to the kindergarten age range I confirm: [ENTER CONFIRMED AGE RANGE].

Do not delete the pages (they may be used by ads).

### P1-7 Remove hidden text from the homepage

server/homepage-freshness.ts lines ~67-69 inject `<div style="display:none" aria-hidden="true">Reviewed by ... Last updated: ...</div>` into the visitor homepage. Remove this hidden block. Do not add a visible replacement unless I ask. Verify: curl the homepage with a Chrome user agent and confirm "display:none" no longer appears with that text.

### P2-1 Give Google real links to every blog post and article

In the bot (SSR) version of /blog, post titles are plain text (server/ssr-pages.ts ~867-883, rendered by server/bot-ssr.ts ~245-250). Result: Google sees no internal links to any /blog/post or root-level article.

1. In the SSR /blog page, render every published blog post (from storage) and every legacy article that is NOT redirected as a real `<a href="...">` link with its title, newest first.

2. Add a "Latest articles" block (5 newest posts, real links) to the SSR versions of /, /programmes and /about.

3. In SSR breadcrumbs keep the existing links.

Verify: fetch /blog with a Googlebot user agent and count the `<a>` links whose href contains "/blog/" (they may be absolute URLs) – it must equal the number of published posts. Do not change the visitor (React) /blog page in this task.

### P2-2 Keep links inside article text in Google's version

server/ssr-pages.ts removes links from article bodies: stripMarkdown (~line 52) replaces [text](url) with text, the EXPLORE\_MORE line handling (~82) drops links, and stripInlineHtml (~118) removes `<a>` tags.

Change these so internal links are kept as `<a href="...">` in the SSR body (escape text properly). External links may stay as plain text. Links whose target is in redirectMap must be rewritten to the final URL.

Verify on /blog/what-age-start-play-school and /pre-kg-age-guide with a Googlebot user agent: the in-text links now appear as `<a>` tags.

## P2-3 Make 'Related articles' actually related

client/src/pages/blog-post.tsx ~lines 1541-1543 always shows the first two posts. Change it to pick 3 posts that share the same category or tags as the current post (fall back to newest posts). Also add the same 3 related links to the SSR entry for each blog post so Googlebot sees them.

Verify on three different posts that the related links differ and are on-topic.

## P2-4 Link the orphan pages

These pages have no internal links in either version: /play-school-near-ghodbunder-road, /play-school-near-majiwada, /play-school-near-naupada, /playgroup-near-ghodbunder-road. In Google's version these also have none: /playgroup-in-dhokali, /faqs, /testimonials, /top-preschools-in-thane, /preschool-readiness-quiz, /pre-kg-age-guide.

1. Add an "Areas we serve" section (real links) to both the React and SSR versions of /best-preschool-near-me-in-thane and /contact, linking each /preschool-in-\*-thane, /playgroup-in-\*, /playgroup-near-ghodbunder-road and /play-school-near-\* page with a descriptive anchor (e.g. "Play school near Majiwada").

2. On the SSR /about page (server/ssr-pages.ts ~639) turn the text "(/preschool-in-manpada-thane)" etc. into real links.

3. Add /faqs, /testimonials, /happy-times and /preschool-readiness-quiz to the SSR footer links (server/bot-ssr.ts ~369-377) and the React footer if missing.

Verify with a Googlebot-user-agent crawl that each page listed above now has at least one inbound link.

## P3-1 Fill in thin SSR pages, show images and visible FAQs

The Google (SSR) version is much thinner than the visitor version on several pages. Words in Google's HTML vs visible words for visitors: /happy-times 121 vs 1,015; /testimonials 137 vs 916; /holi-activities-for-kids 158 vs 2,769; /gallery 165 vs 691; /contact 175 vs 454; /programmes 182 vs 442; /faqs 210 vs 413; / 290 vs 783.

1. For each page above, add introText and contentSections to its entry in server/ssr-pages.ts that match the visible React content (same headings and paragraphs; do not invent new facts).

2. /contact SSR must list all 6 centres with address, phone and a link to each centre page, taken from shared/centre-data.ts.

3. Add an optional images field to the SSR page data and render <img src alt width height loading="lazy"> in server/bot-ssr.ts; use it for /gallery, /holi-activities-for-kids and centre pages.

4. Wherever FAQPage JSON-LD is emitted, render the same questions and answers as visible text in the SSR body (currently missing on /playgroup, /nursery, /kindergarten, /preschool-admissions, /best-preschool-near-me-in-thane, /play-school-near-me, /faqs, all /playgroup-in-\* pages, /playgroup-near-ghodbunder-road, /play-school-near-majiwada, /play-school-near-naupada, /play-school-near-ghodbunder-road, /national-symbols-of-india-for-kids, /holi-activities-for-kids). On the /play-school-near-\* pages the visible Q&A is reworded; make the JSON-LD match the visible wording.

Verify: for each page, the SSR word count is at least 80% of the visitor word count and every FAQ question appears as visible text.

### P3-2 Use one source for titles, descriptions, H1s and canonicals

Google and visitors get different H1s on 23 pages (and /10-spring-gardening-activities-for-preschoolers has no H1 for visitors), different titles on 12 and different descriptions on 36 (lists in the audit, section 6 and Appendix A). Also, the starting HTML for every URL says canonical = homepage and robots = index, follow until JavaScript runs.

1. Make server/ssr-pages.ts the single source of title, description, H1, canonical and robots for each URL. Change the React pages (and their <SEO> props) to read the same values from a shared module instead of hard-coding them.
2. In server/static.ts, when serving the visitor HTML shell, replace the default <title>, meta description, canonical, og:url, twitter:url and robots in client/index.html with the correct values for the requested URL (static.ts already injects JSON-LD at ~22-58; do the same for these tags). Unknown URLs must keep status 404.
3. Homepage: choose one title, description and H1 (I will confirm the wording) and apply it to client/index.html, client/src/pages/home.tsx (~2017), client/src/components/hero-section.tsx (~58-83) and server/ssr-pages.ts (~557-560).
4. Add scripts/check-shell-seo-sync.ts to scripts/predeploy.sh (it currently fails and is not run).

Verify: for 10 random URLs, curl with a Chrome user agent shows the correct canonical and title before JavaScript, and the rendered page matches the Googlebot version.

### P3-3 Accurate sitemap dates

shared/site-freshness.ts line 17 sets LAST\_UPDATED\_ISO = "2026-04-24", used as <lastmod> for 57 of 86 sitemap URLs and as dateModified on ~60 pages.

1. Add a real lastModified date to every entry in server/ssr-pages.ts (static pages, centre pages, playgroup pages, legacy pages) and use it for <lastmod> in shared/sitemap-entries.ts (~175, ~195). Use today's date only for pages you actually change.
  2. Stop using LAST\_UPDATED\_ISO as a site-wide fallback for dateModified and for the visible "Last updated" byline; each page uses its own date.
  3. Remove <changefreq> and <priority> (Google ignores them).
- Verify: /sitemap.xml shows different, plausible dates, and /national-symbols-of-india-for-kids is not dated earlier than 2026-08-04.

### P3-4 Shorten long titles and descriptions; fix the guard

1. Shorten these titles to 60 characters or fewer without losing the main keyword (list with lengths in the audit, section 8): all 20 pages listed there, including /blog/raksha-bandhan-2026-for-kids (71).
  2. Shorten the meta descriptions to 155 characters or fewer on /blog/raksha-bandhan-2026-for-kids (235), /blog/ganesh-chaturthi-for-kids (184) and /blog/independence-day-for-kids (173). Edit the files that are actually served: public/raksha-bandhan-redesign/index.html (served per server/routes.ts ~336-395), blog-pages/ganesh-chaturthi-for-kids/index.html, blog-pages/independence-day-for-kids/index.html.
  3. Update scripts/check-standalone-blog-pages.ts and scripts/check-description-length.ts to check the files that are actually served.
- Show me old and new titles side by side before deploying.

### P3-5 Serve Google's testing tools the same version as Googlebot

In `server/bot-ssr.ts`:

1. Remove "lighthouse" from `BOT_USER_AGENTS` (line ~61) so PageSpeed Insights measures the real site. Update `scripts/predeploy-lighthouse-guard.mjs` so it still passes by setting `emulatedUserAgent` to a normal Chrome user agent.
  2. Add "google-inspectiontool", "storebot-google", "adsbot-google", "googleother" and "bingpreview" to `BOT_USER_AGENTS`.
  3. Remove "google-extended" (it is a robots.txt token, never a user agent).
- Verify with `curl` using the published Google-InspectionTool mobile user agent that the SSR page (with H1) is returned.

### P4-1 One clean structured-data entity per centre

Use `shared/centre-data.ts` as the only source of centre facts.

1. For each centre create ONE entity with `"@type": ["Preschool","ChildCare"]` and `"@id": "https://www.rainbowpreschools.com/preschool-in-{centre}-thane#localbusiness"`, with name, full address including the correct PIN, telephone (centre phone), geo, `openingHoursSpecification`, url (the centre page), image and `parentOrganization {"@id": "https://www.rainbowpreschools.com/#organization"}`.
  2. Remove the other versions: the centre-page `localBusinessSchema` in `server/ssr-pages.ts` (~501-553, with hard-coded postalCode "400607" at ~516 and head-office phone at ~1645-1650), `playgroupSchema` (~470-499), `client/src/components/landing/playgroup-landing-template.tsx` (~60-110, postalCode "400610"), and the Preschool helper in `client/src/components/seo.tsx` (~189-205). Other pages should reference a centre by `{"@id": ...}` only.
  3. Fix image/logo URLs that return 404: `/images/optimized/logo.webp` (centre-data.ts ~194-195, `homepage-freshness.ts` ~55) and `/logo.png` (ssr-pages.ts ~1499). Use `/images/logo.webp`.
  4. Give `websiteSchema` an `"@id": "https://www.rainbowpreschools.com/#website"`.
  5. Remove `HowTo` markup (Google retired it) and the automatic `Article` markup that `bot-ssr.ts` (~211-228) adds to non-article pages such as `/terms`, `/privacy`, `/contact` and programme pages. Keep `BlogPosting` on blog posts, with a per-post image instead of `/og-image.jpg`.
  6. Remove duplicate `BreadcrumbList` on `/holi-activities-for-kids` and `/national-symbols-of-india-for-kids`.
  7. Keep `FAQPage` only on pages where the Q&A is visible (after P3-1).
- Verify every template in `https://validator.schema.org` and Google's Rich Results Test and show me the results.

### P4-2 Correct centre facts everywhere from one data file

I have confirmed these facts for each centre: [PASTE: centre name, address, PIN, phone(s), office hours, class hours, latitude/longitude from Google Maps, Google Maps embed URL, kindergarten age range].

1. Update `shared/centre-data.ts` with exactly these values (including fixing the Manpada number that appears as both 93218 39367 and 93212 39367 at ~49, ~698, ~710).
  2. Replace the placeholder Manpada map embed (centre-data.ts ~52, contains `0x0:0x0` and `1234567890`) with the real embed URL.
  3. Make the footer, contact page, programme pages, SSR pages, schema and `shared/programme-data.ts` read hours, ages and phones from these data files instead of hard-coded text.
  4. Generate `client/public/llms.txt` and `llms-full.txt` from `centre-data.ts`, programme data and the sitemap entries at build time, listing each centre's own phone and PIN, and fix the `llms-full.txt` link to `/republic-day-2026` (use `/blog/republic-day-2026`). Replace "6 centres across Thane West" wording with "6 centres across Thane".
- Verify by searching the whole project for the old PINs/phones/hours and showing me that none remain hard-coded.

#### P4-3 One set of official social profiles

Our official profiles are: [PASTE CONFIRMED FACEBOOK, INSTAGRAM, YOUTUBE, JUSTDIAL AND GOOGLE MAPS URLS].

Create one constant (e.g. shared/brand-profiles.ts) and use it for Organization sameAs and for footer links, replacing the four different sets in server/ssr-pages.ts (~359-365), client/src/components/seo.tsx (~141-144), client/src/pages/home.tsx (~151-155) and client/src/components/footer.tsx (~34, 44, 54). Give every Organization node "@id": "https://www.rainbowpreschools.com/#organization".

#### P5-1 Reduce server response time

Real Chrome users on phones wait 2.1 s (75th percentile) for the first byte of HTML. HTML is served with Cache-Control: no-store.

1. Tell me which region the production deployment runs in and whether it can be moved to an Asia (India-near) region.
2. Measure server time for / and /playgroup for bots and visitors (add a Server-Timing header) and report where time is spent.
3. Keep the existing in-memory page cache, but cache only known routes (server/static.ts ~105, ~212-213 currently caches every requested path including 404s, which can grow memory without limit).

Do not enable Cloudflare "Cache Everything" for HTML (it previously served bot pages to parents).

#### P5-2 Lighter, correct tracking

1. Consolidate Google tags: three separate Google tag payloads load on every page tested (G-G1MX1N0M05 and GT-55BFZCQT in client/index.html ~92-129, plus GTM-WD43XLBJ loaded through /xrdb/). Load one tag container and configure the other destinations inside it; keep the deferred loading.
2. Load the Meta Pixel(s) only after first user interaction or 5 seconds, and confirm whether both Pixel IDs are needed.
3. The Google tag itself loads successfully through the first-party path /xrdb/, but two other /xrdb/ requests fail (404) on every page. Find where /xrdb/ is configured (Google tag gateway / Cloudflare route / server/routes.ts ~451-452) and fix the failing paths. Do NOT remove the /xrdb/ route. Confirm with Google Tag Assistant that GA4 page views and form events arrive.
4. server/redirects.ts ~698-705: stop redirecting URLs that contain utm\_ parameters (canonical tags already handle duplicates) so UTM values reach the forms.
5. Add the standard deferred Google tag snippet to the 5 standalone blog pages (Ganesh Chaturthi, Independence Day, Navratri, Janmashtami, Raksha Bandhan).

Show me a before/after count of script bytes on the homepage.

#### P5-3 Stop loading the 3D map on every /contact visit

client/src/pages/contact.tsx line 11 statically imports Interactive3DMap, which imports three.js from an unreleased branch (package.json: "three": "github:mrdoob/three.js#dev").

1. Load the 3D map with React.lazy only when the user taps a "View 3D map" button (or when it scrolls into view on desktop); show a static image or the Google Map first.
2. Pin "three" to the latest released npm version and check /dummy still works.

Verify with Lighthouse mobile that /contact Total Blocking Time drops substantially.

#### P5-4 Preload the hero image only on the homepage

client/index.html (~58-60, ~152-155) preloads /images/optimized/hero-banner-1.webp with fetchpriority=high and includes a static hero <img> for every URL. Inject these only when serving "/" (server/static.ts already special-cases "/" around ~148-155). Verify that /playgroup no longer requests hero-banner-1.webp.

#### P5-5 Lighter media and stable layout

1. The 13.5 MB video public/assets/RPS\_Walkthrough\_Video\_-\_Website\_1\_1766126796450.mp4 autoplays in client/src/pages/play-school-near-me.tsx (~line 723), client/src/pages/best-preschool-in-thane.tsx (~line 347, serves /best-preschool-near-me-in-thane) and client/src/pages/preschool-admissions.tsx (~line 214), and on the noindex /ad and /flyer pages: add a poster image, mount the video only when it scrolls into view, re-encode a 720p version under 3 MB, and remove the duplicate copy in client/public/assets.
2. blog-pages/independence-day-for-kids: serve 800-px WebP versions inline (with width and height) and keep the original JPGs only as download links.
3. Resize public/characters/student-girl.webp (3375×4219 px, 417 KB) to 2× its display size and add width/height (home.tsx ~583).
4. Add width and height to the 21 <img> tags without them (list them first).
5. Fix the footer layout shift on /10-spring-gardening-activities-for-preschoolers and /contact (reserve space for content loaded late).

#### P5-6 Smaller homepage JavaScript

1. home.tsx imports programmes/branches/testimonials from shared/schema.ts, which pulls drizzle-orm and zod into the homepage bundle. Move these static arrays into a new dependency-free file (shared/site-data.ts) and import from there.
2. ProgrammeCard (client/src/components/ui/programme-card.tsx) imports framer-motion; replace the effect with CSS or lazy-load it.
3. Run a production build with a bundle visualiser (outside production) and show me the entry chunk size before and after.

#### P6-1 Remove stale years and unverifiable claims

1. Replace "2025-26" / "2025-26" with "2026-27" in client/src/components/legacy-landing-page.tsx (~352), client/src/components/blog-internal-links.tsx (~15) and anywhere else it appears in visible copy (21 legacy article pages show it). Better: read the current admission year from one constant.
2. Remove every "across 6 generations of ... families" phrase (server/ssr-pages.ts ~719, 959, 1014; live on /best-preschool-near-me-in-thane, /preschool-admissions and /playgroup).
3. Use one wording for the 1,00,000 figure everywhere (e.g. ssr-pages.ts ~564 says "families", other places "alumni" or "learners"); I will confirm which is correct: [CONFIRM]. List every change.

#### P6-2 Make the playgroup locality pages distinct

The five /playgroup-in-\* pages and /playgroup-near-ghodbunder-road are 84-86% identical in the version Google receives. For each page, replace templated paragraphs with centre-specific facts from shared/centre-data.ts and content I provide: [PASTE per-centre details: nearby landmarks, batch timings, facilities, photos]. Do not invent facts. If a page has no real centre behind it (for example "near Ghodbunder Road"), tell me so we can decide whether to merge it into the nearest centre page with a 301.

### P6-3 Point old URLs at the right pages

server/redirects.ts has 50 redirect-map entries whose target is "/" (the homepage), plus pattern rules that also send URLs there.

1. List all 50 with their current target.
2. Change these now: /thane/aggarwal/ → /preschool-in-manpada-thane (Aggarwal Arcade is the Manpada centre address); /thane/kasarwadavli/ → /preschool-in-kasarvadavali-thane; /centres → /contact. Note: /thane/\* URLs are sent to "/" by a prefix rule (server/redirects.ts ~770-772) that runs BEFORE the redirect map, so add these two mappings before that rule (or exempt them from it), otherwise they will have no effect. Also list the other pattern rules that send URLs to "/" (/navi-mumbai/\*, /mumbai/\*, .php, /wp-\*).
3. Add a redirect /programme → /programmes (linked from Edustoke, currently 404).
4. For the others, suggest the closest matching page for each; if nothing matches, suggest returning 410 (Gone). Wait for my approval before changing them.

### P6-4 Bing Webmaster Tools and IndexNow

1. I will verify the site in Bing Webmaster Tools and give you the verification file or msvalidate.01 value: [PASTE]. Add it so it is served to all user agents (including in the SSR head in server/bot-ssr.ts).
2. Implement IndexNow: generate a key, serve /{key}.txt, and ping <https://api.indexnow.org/indexnow> with changed URLs after each deploy (only URLs that actually changed).
3. Also add the existing Google verification meta tag (client/index.html line 10) to the SSR head so it is present for all user agents.

## Appendix A: every page, one row each

All 98 HTML pages that returned 200 on 23 Sep 2026. "Words" = visible words in the HTML Google receives / words visitors see after the page loads (desktop). "Int. links" = number of other crawled pages linking to it in each version. GSC = 26 Aug–23 Sep 2026 (100-row export; "-" = not in the export). Near-duplicate = 5-word-sequence overlap  $\geq 0.84$  with a sibling page in Google's copy.

| Page                              | Type       | Sitemap | Words: Google / visitor | Int. links to page: Google / visitor | GSC 28 d: clicks / impr. / pos. | Flags                                                          |
|-----------------------------------|------------|---------|-------------------------|--------------------------------------|---------------------------------|----------------------------------------------------------------|
| /                                 | Home       | Yes     | 290 / 783               | 99 / 91                              | 138 / 7,557 / 7.0               | Google HTML much thinner; H1 differs bot/user; AggregateRating |
| /happy-times                      | Programme  | Yes     | 121 / 1015              | 2 / 9                                | 0 / 17 / 42.9                   | Google HTML much thinner; Title 61 chars                       |
| /kindergarten                     | Programme  | Yes     | 493 / 1278              | 97 / 81                              | 2 / 193 / 21.5                  | Google HTML much thinner                                       |
| /nursery                          | Programme  | Yes     | 466 / 1532              | 97 / 82                              | 3 / 620 / 13.5                  | Google HTML much thinner                                       |
| /playgroup                        | Programme  | Yes     | 802 / 1240              | 97 / 84                              | 9 / 568 / 19.3                  | —                                                              |
| /programmes                       | Programme  | Yes     | 182 / 442               | 99 / 76                              | 0 / 44 / 29.4                   | Google HTML much thinner                                       |
| /best-preschool-near-me-in-thane  | Commercial | Yes     | 1975 / 653              | 94 / 85                              | 2 / 593 / 28.3                  | AggregateRating                                                |

| /About, /PLAYGROUP                                   | 404                                                                 |
| /this-page-does-not-exist-xyz                        | 404                                                                 |
| /blog/index.html                                     | Chrome: 200; Googlebot: 404 ("Page Not Found", noindex)             |
| /images/optimized/logo.webp, /logo.png               | 404 (used in schema)                                                |
| /nursery-school-admission-thane                      | 301 → /nursery (linked from Google's copy of /nursery)              |
| /programme                                           | 404 (linked from Edustoke)                                          |
| /xrdb/anything                                       | 400                                                                 |
| /api/contacts                                        | 200, 8,447 bytes JSON, no login required                            |

### B.2 Internal links in the visitor version that return 404

| Target                                   | Linked from   |
|------------------------------------------|---------------|
| /blog/parents-prepare-child-school       | /kindergarten |
| /blog/preschool-vs-daycare               | /nursery      |
| /preschool-near-panch-pakhadi-thane-west | /nursery      |

121 further internal link targets in the visitor version return 301; 116 of them are linked from the /blog grid. Most common redirect destinations: /about (16), /blog/how-play-based-learning-shapes-young-minds (14), /preschool-admissions (11), /blog (8), /playgroup (8).

### B.3 Bot HTML vs visitor HTML: which crawlers get which

Bot HTML (full text, H1): Googlebot, Bingbot, DuckDuckBot, Applebot, GPTBot, OAI-SearchBot, ChatGPT-User, ClaudeBot, Claude-SearchBot, Claude-User, PerplexityBot, Perplexity-User, Amazonbot, CCBot,

Meta-ExternalAgent, facebookexternalhit. React starting page (10–22 words before JavaScript): normal Chrome visitors and Google-InspectionTool (mobile).

## Appendix C: method

---

- **Crawl.** Python crawler with the Googlebot smartphone user agent, seeded from sitemap.xml (86 URLs), every static route in client/src/App.tsx (69) and every internal link found; redirects followed hop by hop; titles, descriptions, canonicals, robots, H1–H6, JSON-LD (parsed and validated as JSON), links, images, headers and text recorded per page.
- **Render.** Headless Chromium with normal Chrome user agents (desktop 1366×900 and mobile Pixel-class 412×915), waiting for network idle and scrolling to the bottom before reading the page.
- **Word counts.** Google's figure = all text in the HTML body the bot receives (including collapsed or hidden sections). Visitor figure = text visible after loading ( `innerText` ), so collapsed FAQ answers are not counted. A lower Google figure is therefore a conservative sign of thin bot HTML; a lower visitor figure may only reflect collapsed content, so it is not flagged.
- **H1 comparison.** Whitespace and spaces before punctuation are ignored, so formatting-only differences are not counted.
- **Link graph.** Built separately from Google's copy and from the visitor copy; a page counts as linked if any other crawled page links to it.
- **Near-duplicates.** Jaccard similarity of 5-word sequences of body text.
- **Code review.** Read-only review of the repository at commit d941ef7; numbers such as redirect counts and sitemap contents were computed by importing the repository's own modules outside the project folder.
- **Search Console and CrUX.** Advanced GSC connector (free plan): 30 days of data, 100 rows per request, 10 URL inspections, origin-level CrUX.
- **Lab speed.** Lighthouse 13.5.0 CLI, 3 runs per page and device, median reported; Playwright network capture for page weight.
- **Listings.** Web search (US results), then each listing page fetched and its name, address and phone compared character by character with the site.

All raw evidence (crawl data, rendered data, Lighthouse reports, Search Console exports, listing pages) was saved during the audit and can be supplied on request.
